Installation:

1) Latest .net framework
2) MySQL workbench (probably optional) https://dev.mysql.com/downloads/workbench/
3) MySQL Connector/NET 8.0.22 https://dev.mysql.com/downloads/connector/net/
4) Excel most be installed on your computer

What is explained above should allow you to run the .exe file on a Windows machine. .exe file patch:

project1Submited\GUI\Student Management System\bin\Debug\Student Management System.exe

However, if this did not work, then using Visual Studio 2019 you can compile the project and run it without an issue since I have provided the project files.
